- **Chi-Square** – used to test for statistical significance. Answers the question, “Do we have a large enough sample to know our results are conclusive?”.
- **Heidke Skill Score** – used to test whether we are beating persistence or climatology.
- **Bias** – used to determine whether we are over-forecasting or under-forecasting.

Review

- HWD – Strong to moderate skill. Slight tendency to overforecast. Need to evaluate convective precip. potential better so we don't just outline the TSTM areas.

- TSTMS – Strong to moderate skill. No significant trends in BIAS. Convective activity is becoming more isolated and harder to define coverage areas so expect overforecasting trend to be higher.
